Professional Summary

Computer Science Engineering graduate with hands-on experience in **full-stack web development using the MERN stack (MongoDB, Express.js, React.js, Node.js)** and strong programming skills in **Java and JavaScript**. Experienced in building **RESTful APIs, scalable backend systems, and responsive web applications**. Proficient with **SQL/NoSQL databases, Linux, and Git workflows**, with a focus on performance optimization and secure, production-ready solutions.

Technical Skills

- **Languages:** JavaScript (ES6+), Java
- **Frontend:** React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Context API, Redux Toolkit, SCSS
- **Backend:** Node.js, Express.js, REST APIs, JWT, OAuth, GenAI APIs
- **Database:** MongoDB, Mongoose, Aggregation, Indexing, local Storage
- **Tools:** Git, GitHub, Postman,
- **Certification**: Fullstack Development with Gen AI (Sheryians Coding School)

Experience

Freelancing *Full Stack Developer*

- Designed and deployed full-stack web applications using the **MERN stack (MongoDB, Express.js, React.js, Node.js)** along with JavaScript and SQL databases, ensuring scalability and security.
- Built and optimized **RESTful APIs with Node.js and Express.js**, implemented dynamic frontend features
- Created secure APIs to support profile creation, modification, and controlled updates of personal details, adhering to clean workflow standards.
- Built and improved frontend interfaces for profile management while engaging in active collaboration through code reviews, pull requests, and version control.

Education

Gargi Memorial Institute of Technology, Baruipur June 2025
B. Tech in Computer Science and Engineering

Projects

Perplexity Clone - AI Powered Search Assistant *[Github]*

- Built an **AI-powered search assistant** similar to Perplexity using the **MERN stack (MongoDB, Express.js, React.js, Node.js)** with real-time communication via **Socket.io**.
- Integrated **LangChain and Tavily API** to enable web search, context retrieval, and AI-generated answers with relevant sources.
- Implemented **real-time streaming responses**, chat history management, and persistent storage using **MongoDB**.
- Designed a responsive **React-based dashboard UI** with dynamic chat sessions, improving user interaction and search experience.

Moodify- Mood-Based Music Recommendation System *[Github]*

- Developed **Moodify**, a web application that detects **user facial expressions** and recommends songs based on the detected mood using the **MERN stack (MongoDB, Express.js, React.js, Node.js)**.
- Integrated **Google MediaPipe** for real-time **face detection and emotion analysis** directly in the browser.
- Built a dynamic **React frontend with Context API** for global state management and seamless user interaction.
- Implemented backend APIs and **MongoDB storage** and **Imagekit** to manage user preferences, song recommendations, and application data.

Ambulance Plus -PHP, JavaScript, HTML5, CSS, Ajax

- Designed and deployed a real-time ambulance booking system with secure authentication, session management, and role-based access control.
- Optimized SQL queries and AJAX-based updates, reducing booking request-response time by 40%.
